Strength You Can See Through.

EKO PANES CATALOGUE

COMPANY OVERVIEW

About Eko Panes

Eko Panes Limited was established to address a critical demand within the construction industry, the need for locally processed, world-class safety glass delivered with reliability and precision. Operating from our facility in Magboro, Ogun State, we transform float glass into high-performance architectural solutions designed for modern construction projects.

From commercial high-rise developments to luxury residential projects, we serve as a trusted technical partner to contractors, developers, and construction professionals who prioritize durability, quality, and architectural excellence.

Core vision

To be recognized as a leading glass processing company delivering innovative, high-strength glass solutions that shape modern architecture and construction.

Core Mission

To deliver high-performance glass solutions through precision manufacturing, operational excellence, and uncompromising quality, ensuring every product reflects both clarity in form and strength in function.

SERVICES OFFERED

Cutting

The foundation of every successful glass installation begins with precision cutting. At Eko Panes Limited, we utilize advanced cutting technology to transform raw float glass into accurately measured panels tailored to project-specific dimensions. Our process ensures consistency, clean finishing, and dimensional accuracy required for modern architectural and construction applications

Dulling, Washing & Tempering

Our finishing and tempering processes are designed to enhance both the safety and durability of architectural glass. Through precision edge dulling, professional washing, and controlled thermal tempering, we strengthen glass to withstand structural pressure, environmental stress, and daily impact. The result is high-performance safety glass suitable for demanding commercial and residential projects.

Laminating

Our laminated glass solutions are engineered to provide enhanced safety, durability, and structural integrity. Using advanced interlayer bonding technology, multiple layers of glass are permanently fused to create high-performance architectural glass capable of improved impact resistance and security. Laminated glass is ideal for facades, railings, floors, skylights, and other modern building applications where safety and aesthetics are essential

ADDED VALUE SERVICES

End-to-End Glass Supply

From Raw Material to Finished Project: Skip the stress of sourcing. We procure premium raw float glass directly for your project, managing the entire pipeline from raw supply through custom cutting, washing, tempering, and laminating. One partner, absolute efficiency.

Professional Architectural Installation

Precision Manufacturing. Seamless Execution: We don't just process your glass—we install it. Our specialized engineering teams ensure flawless on-site integration, matching meticulous safety standards across all complex architectural layouts.

End-to-End Glass Supply

Key Applications We Execute:

- Structural Facades & Curtain Walls
- Heavy-Duty Glass Railings & Balustrades
- Custom Skylights & Architectural Floors
- Premium Interior Partitioning
- and so much more

MACHINES & EQUIPMENT

Advanced Manufacturing Capability:

Eko Panes Limited operates a professionally equipped glass processing facility built to meet the technical demands of modern architectural and construction projects. Our machinery combines precision engineering, industrial efficiency, and quality-focused production processes to ensure every glass product meets exact project specifications.

OPERATORS AT OUR LAMINATION MACHINE

PORTFOLIO

RECEIVING CUSTOM WORK AT THE FACTORY

At Eko Panes Limited, we deliver precision-processed architectural glass solutions tailored to the technical demands of modern construction projects. Our portfolio reflects our commitment to quality, durability, timely delivery, and professional execution across commercial and residential developments.

FACTORY & FACILITY SHOWCASE

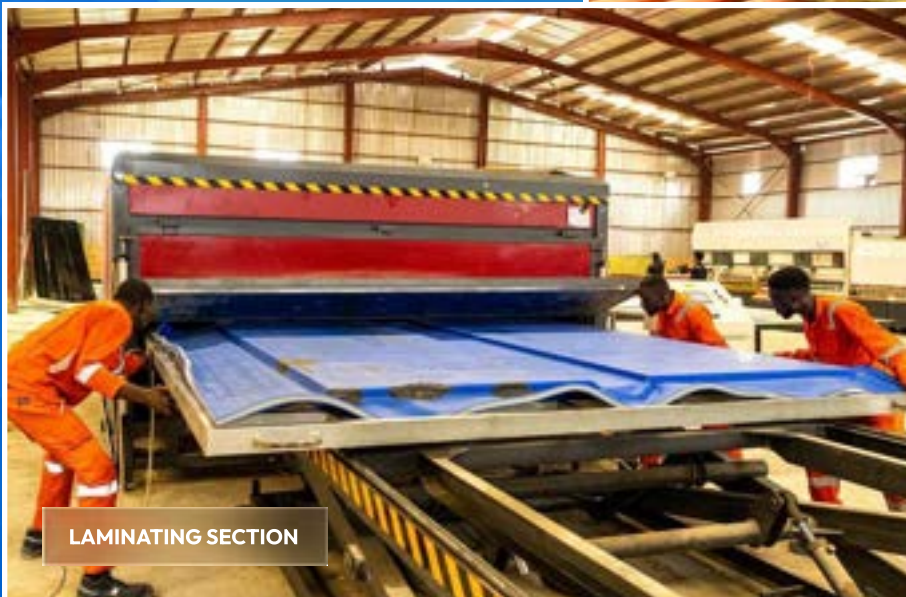

Eko Panes Limited operates a professionally managed glass processing facility designed to support precision manufacturing, operational efficiency, and large-scale project delivery. Our production environment reflects our commitment to quality, safety, and industrial excellence across every stage of glass processing.

OPERATOR AT OUR CNC CUTTING MACHINE

Production Facility

Our factory is equipped with dedicated processing areas for cutting, tempering, laminating, finishing, and quality inspection. Each section of the production floor is structured to ensure smooth workflow, operational accuracy, and consistent manufacturing standards.

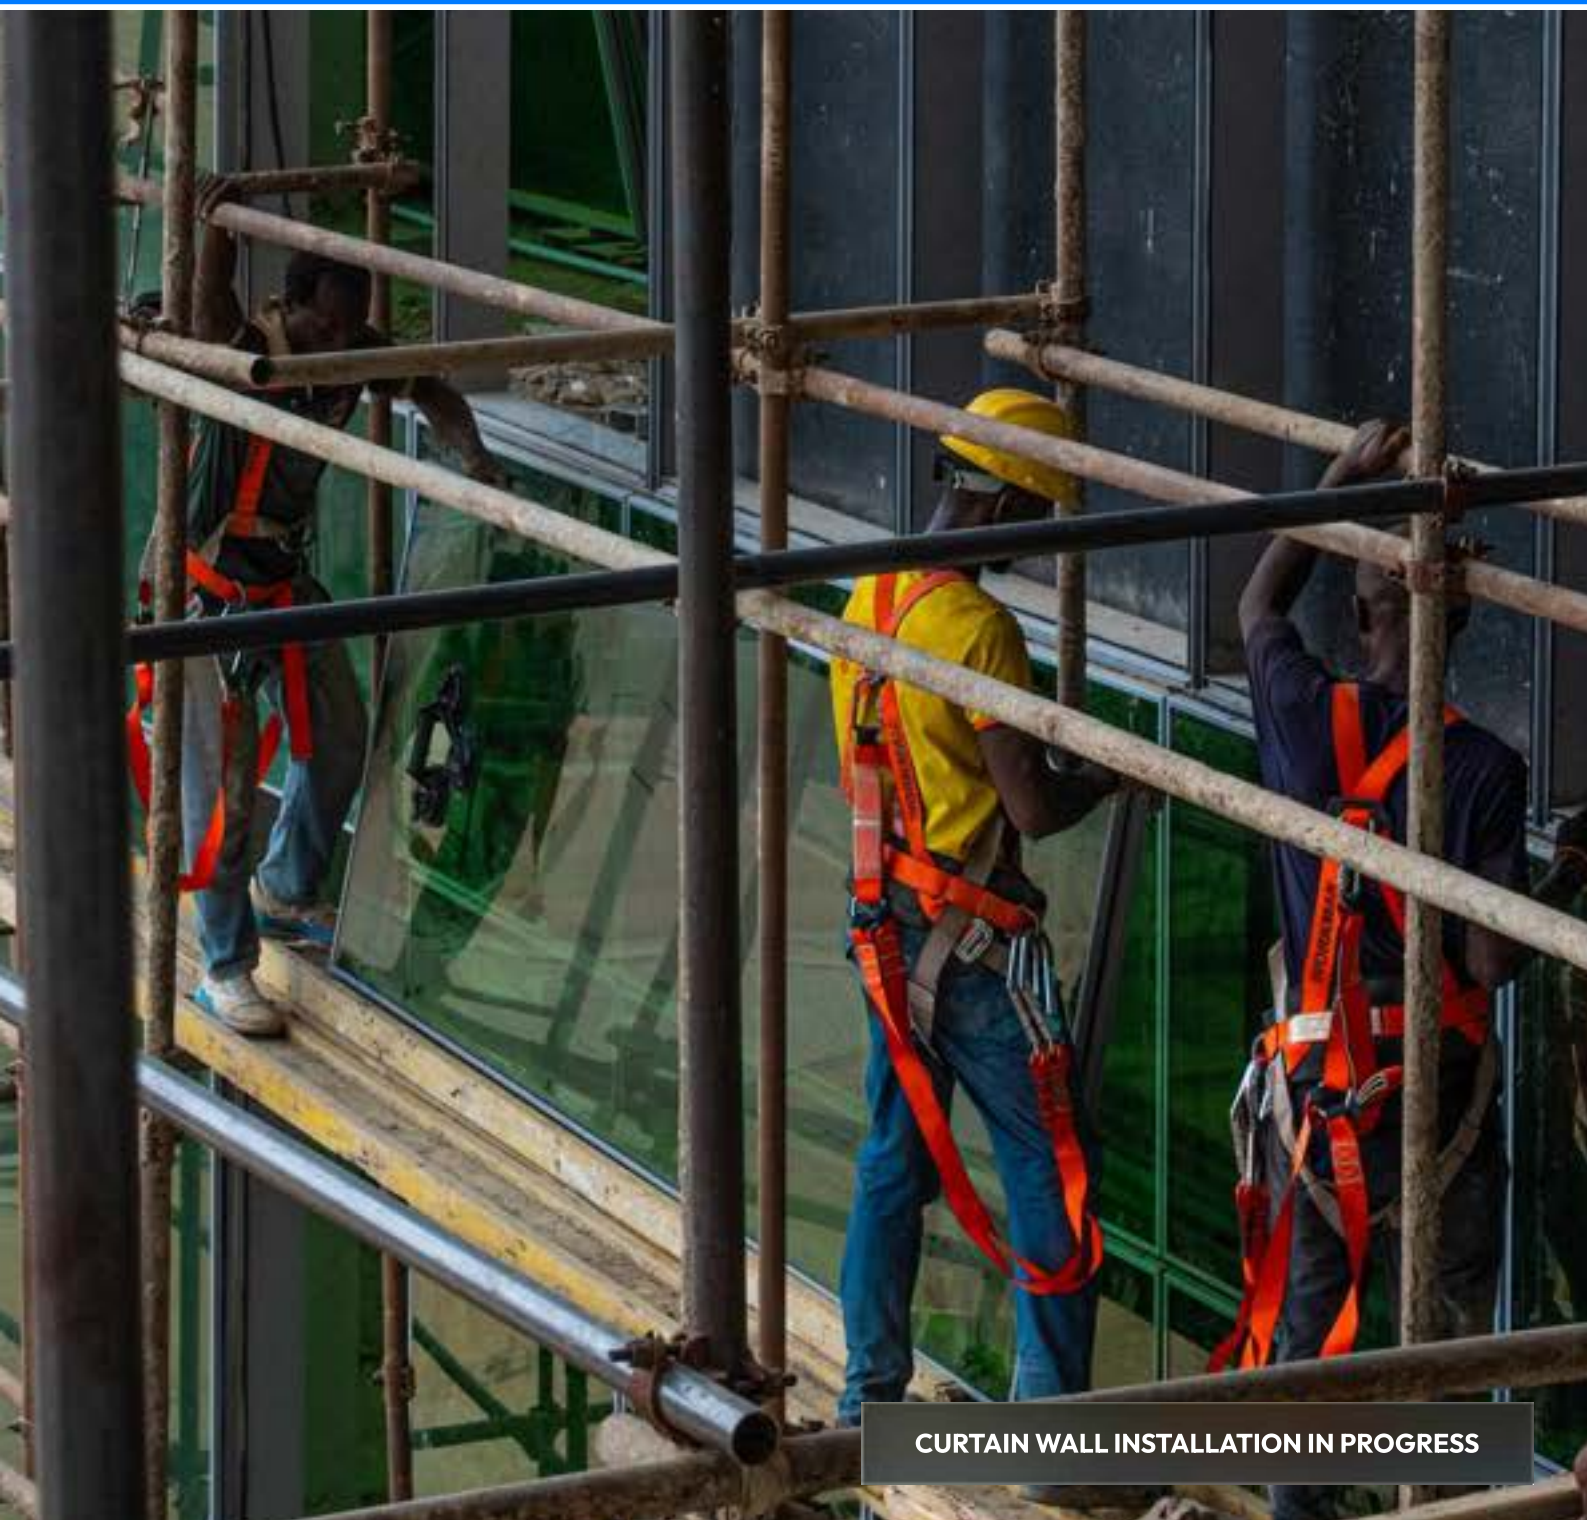

RAW GLASS PANELS

Storage & Material Handling

We maintain organized storage systems for raw materials and finished products to ensure safe handling, product protection, and efficient dispatch operations for client projects.

Safety & Operational Standard

Safety remains a critical part of our operational process. Our facility follows structured safety procedures designed to support safe equipment handling, controlled production processes, and professional workplace operations.

CURTAIN WALL INSTALLATION IN PROGRESS

Clean & Professional Environment

We maintain a clean, organized, and professionally managed workspace that reflects the discipline and operational standards required for modern architectural glass manufacturing.

OUR GLASS PROCESSING FACTORY FLOOR

SUCCESS STORIES & PAST PROJECTS

With our clients, we protect your privacy while proving your operational capacity. Please Match These Stories With Realistic AI architectural renders.

Project Profile 01: The Residential Monolith (Lekki)

Structural Minimalist Glass Staircase & Balustrades.

Engineered custom-cut laminated safety glass panels for a premium residential interior, combining high-end transparency with extreme load-bearing structural strength.

Project Profile 02: Industrial Scaled Fenestration (Ota)

Commercial Glazing & High-Performance Window Systems.

Supplied a massive bulk order of high-strength tempered safety glass panels for an industrial-scale manufacturing complex, meeting tight project timelines and strict building codes.

WHY CHOOSE US

At Eko Panes Limited, we combine modern manufacturing technology, skilled expertise, and quality-driven processes to deliver reliable architectural glass solutions for commercial and residential projects.

Our commitment to precision, timely delivery, and customer satisfaction makes us a trusted partner for construction professionals.

INDUSTRIES WE SERVE

Our glass solutions are designed to support a wide range of industries, including:

- Construction
- Real Estate Development
- Oil & Gas
- Manufacturing
- Industrial Facilities
- Commercial Architecture
- Agriculture & Processing Plants

We deliver reliable architectural glass solutions tailored to modern industry standards.

CONNECT WITH US

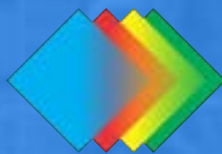

Stay connected with Eko Panes Limited for updates on our projects, manufacturing processes, and architectural glass solutions.
